ENVIRONMENTAL PRODUCT DECLARATION

CORBIN RUSSWIN

CL3300 SERIES CYLINDRICAL LOCK

The Corbin Russwin CL3300 Series Cylindrical Lock, is an ANSI/BHMA A156.2 Series 4000 Grade 1 mechanical cylindrical lock. It has a reversible stainless steel latch with deadlatch.

Corbin Russwin

ASSA ABLOY

ASSA ABLOY is committed to providing products and services that are environmentally sound throughout the entire production process and the product lifecycle. Our unconditional aim is to make sustainability a central part of our business philosophy and culture, but even more important is the job of integrating sustainability into our business strategy. The employment of EPDs will help architects, designers and LEED-APs select environmentally preferable door openings. The Corbin Russwin CL3300 Series Cylindrical Lock EPD provides detailed requirements with which to evaluate the environmental and human health impacts related to producing our door openings. ASSA ABLOY will continue our efforts to protect the environment and health of our customers/end users and will utilize the EPD as one means to document those efforts.

UL CERTIFIED ENVIRONMENTAL PRODUCT DECLARATION UL.COM/EPD

ENVIRONMENTAL PRODUCT DECLARATION

Corbin Russwin
ASSA ABLOY

Corbin Russwin
CL3300 Series Cylindrical Lock

According to EN 15804 and ISO 14025
Dual Recognition by UL Environment and Institut Bauen und Umwelt e.V.

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

CL3300 Series Cylindrical Lock

Owner of the Declaration
Corbin Russwin
225 Episcopal Rd
Berlin, CT 06037 USA

Declared product / Declared unit
The declaration represents 1 single point lock consisting of the following:
- CL3300 Series Cylindrical Lock

inclusive of lock body, latches, levers, roses, strikes and all mounting hardware.

Scope:
This EPD is based on the full lifecycle of 1 Corbin Russwin CL3300 Series Cylindrical Lock. Data was collected from the lock case manufacturer in Berlin, Connecticut (US).
The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Verification

The CEN Standard EN 15804 serves as the core PCR
Independent verification of the declaration and data according to ISO 14025

2. Product

2.1 Product description
The Corbin Russwin CL3300 Series Cylindrical Lock, is an ANSI/BHMA A156.2 Series 4000 Grade 1 mechanical cylindrical lock. It has a reversible stainless steel latch with deadlatch.

The CL3300 Series is available with 24 different mechanical locking functions and 2 electrical functions, 11 Architectural grade finishes and an array of lever options.

- ANSI/BHMA A156.2 Series 4000 Grade 1 Certified
- Meets A117.1 Accessibility Code.

2.2 Application
The locks are designed for single or double leaf doors with mullions. The locks are typically installed in commercial buildings, such as
- Commercial campuses
- Colleges
- Detention centers
- Dormitories
- Hospitals
- Warehouses
- Psychiatric wards
- Any high abuse applications

2.3 Technical Data
The following table lists the technical properties of Corbin Russwin CL3300 Series Cylindrical Lock:

Technical data

Item	Value
Backset	2-3/4" (70 mm) Standard 3-3/4" (95 mm), 5" (127 mm) Optional
Door Thickness	1-3/4" (44 mm) thick standard adjust to 2" (51 mm)
Door prep	161 Door Prep Modified

Handing	Non handed
Keying	Can be masterkeyed or grad masterkeyed

2.4 Placing on the market / Application rules
The products are subject to UL marking. Relevant norms are: ANSI/BHMA A156.2 American Standard for Bored & Preassembled Locks and Latches.

2.5 Delivery status
Delivered as a complete unit, inclusive of lock body, trim, strike and fasteners or as separate lock case. Delivered in a box size 9.75" x 7.5" x 4.75" (248 x 190 x 121mm).

2.6 Base materials / Ancillary materials
The average composition of the Corbin Russwin CL3300 Series Cylindrical Lock is as following:

Component	Percentage in mass (%)
Brass	10.7
Copper	2.66
Plastic Parts	0.22
Stainless Steel	5.08
Steel	39.39
Zinc	40.07
Others	1.88
Total	**100.0**

2.7 Manufacture
Products are manufactured and assembled in the United States and are supported by tier-1 supplier in Mexico. The components come from processes such as stamped steel, zinc and steel casting.

Products are manufactured and assembled in the United States and are supported by tier-1 supplier in Mexico. The components come from processes such as stamped steel, zinc and steel casting.

2.8 Environment and health during manufacturing
ASSA ABLOY is committed to integrating our sustainability efforts across the organization. Our priorities are to: reduce resource and energy consumption; reduce carbon emissions; improve water and waste management; improve health and safety performance in operations; improve sustainability performance within our supply chain and enhance the sustainability performance in ASSA ABLOY's supply of door opening solutions. Inspections, audits, and reviews are conducted periodically to ensure that applicable standards are met and environmental management systems are evaluated.
Our Code of Conduct covers business ethics, workers' rights, human rights, environment and health & safety, consumer interests and community outreach. It provides the framework for ASSA ABLOY's daily operations.

• The Berlin facility complies the requirements of the Code of Federal Requirements (CFR) 29 part 1910 General Industry and are under the oversight of the United States Department of Labor and the Occupational Safety and Health Administration.
• The Berlin facility is currently certified to ISO 9001-2008. Upgrading to 9001-2014 in 2015. Lab Certification audit to ISO 17025 in Dec 2014. Working towards ISO 14000 with current goal of 1st qtr 2015.
• Any waste metals (chips) during machining are separated and recycled.
• Waste cleaners and rinses are processed internally in our Waste Water Treatment facility.
• Waste solids are packaged and shipped offsite for treatment by a CT DEEP approved waste handler.

2.9 Product processing/Installation
Corbin Russwin locks are distributed through, and installed by trained technicians, such as locksmiths or security technicians. Preparation of doors and frames are conducted at the door manufacturer's production site.

2.10 Packaging
All packaging is fully recyclable. The packaging material is composed by cardboard (app. 70%) and plastic foil (app. 30%).

Material	Value (%)
Paper packaging	100.0
Total	**100.0**

2.11 Condition of use
Locks require no maintenance.

2.12 Environment and health during use
There is no harmful emissive potential. No damage to health or impairment is expected under normal use corresponding to the intended use of the product.

2.13 Reference service life
The reference service life of 30 years is based on a typical installation of a Corbin Russwin CL3300 Series Cylindrical Lock as a security lock operated when the facilities are to be closed or opened. If operations per day exceeds that typical wear the locks are exposed to the life time is limited to 800,000 cycles in accordance with ANSI/BHMA A156.2.
Influences on ageing when applied in accordance with the rules of technology.

2.14 Extraordinary effects

Fire
Suitable for use in fire and smoke doors: (listed by Underwriters Laboratories)

Water
Contain no substances that have any impact on water in case of flood. Electric operation of the device will be influenced negative.

Mechanical destruction
No danger to the environment can be anticipated during mechanical destruction.

2.15 Re-use phase
The product is possible to re-use during the reference service life and be moved to one door to another. The majority, by weight, of components are steel, iron and zinc which can be recycled. The plastic components can be used for energy recovery in an incineration process. The lock can either be sent back to Corbin Russwin for recycling or to a professional recycling service provider.

2.16 Disposal
The product can be mechanically dissembled to separate the different materials. 98% of the materials used are recyclable. The rest is disposed as a construction waste for landfill.

3. LCA: Calculation rules

3.1 Declared Unit
The declaration refers to the functional unit of 1 piece of single point lock Corbin Russwin CL3300 Series as specified in Part B requirements on the EPD for PCR Locks and fittings: (mechanical & electromechanical locks & Fittings).

Declared unit

Name	Value	Unit
Declared unit	1.7445	1 Piece of single point lock
Conversion factor to 1 kg	0.5732	-

3.2 System boundary
Type of the EPD: cradle to gate - with Options
The following life cycle phases were considered:

Production stage:
- A1 – Raw material extraction and processing
- A2 – Transport to the manufacturer and
- A3 – Manufacturing

Construction stage:

- A4 - Transport from the gate to the site
- A5 – Packaging waste processing

The use stage:
- B2 - Maintenance (cleaning of the locks)

End-of-life stage:
- C2 – Transport to waste processing
- C4 – Disposal (landfill)

This includes provision of all materials, products and energy, packaging processing and its transport, as well as waste processing up to the end-of waste state or disposal of final residues.

- D - Declaration of all benefits or recycling potential from EOL and A5.

3.3 Estimates and assumptions

EoL:
In the End-of-Life phase, for all the materials which can be recycled, a recycling scenario with 100% collection rate was assumed.

3.4 Cut-off criteria
In the assessment, all available data from the production process are considered, i.e. all raw materials used, auxiliary materials (e.g. lubricants), thermal energy consumption and electric power consumption - including material and energy flows contributing less than 1% of mass or energy (if available). In case a specific flow contributing less than 1% in mass or energy is not available, worst case assumption proxies are selected to represent the respective environmental impacts.

Impacts relating to the production of machines and facilities required during production are out of the scope of this assessment.

3.5 Background data
For life cycle modeling of the considered products, the GaBi 6 Software System for Life Cycle Engineering, developed by PE INTERNATIONAL AG, is used /GaBi 6 2013/. The GaBi-database contains consistent and documented datasets which are documented in the online
GaBi-documentation /GaBi 6 2013D/.
To ensure comparability of results in the LCA, the basic data of GaBi database were used for energy, transportation and auxiliary materials.

3.6 Data quality
The requirements for data quality and background data correspond to the specifications of the /IBU PCR PART A/.
PE INTERNATIONAL performed a variety of tests and validations during the commission of the present study in order to ensure its quality of the present document and results. This obviously includes an extensive review of project-specific LCA models as well as the background data used.
The technological background of the collected data reflects the physical reality of the declared products. The datasets are complete and conform to the system boundaries and the criteria for the exclusion of inputs and outputs.
All relevant background datasets are taken from the GaBi 6 software database. The last revision of the used background data has taken place not longer than 10 years ago.

3.7 Period under review
The period under review is 2013/14 (12 month average).

3.8 Allocation
Regarding incineration, the software model for the waste incineration plant (WIP) is adapted according to the material composition and heating value of the combusted material. In this EPD, the following specific life cycle inventories for the WIP are considered for:
- Waste incineration of plastic
- Waste incineration of paper

Regarding the recycling material of metals, the metal parts in the EoL are declared as end-of-waste status. Thus, these materials are considered in module D. Specific information on allocation within the background data is given in the GaBi dataset documentation.

3.9 Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account.

4. LCA: Scenarios and additional technical information

The following technical information is a basis for the declared modules or can be used for developing specific scenarios in the context of a building assessment if modules are not declared (MND).

Installation into the building (A5)

Name	Value	Unit
Output substances following waste treatment on site (Plastics packaging)	0.0008	kg

Maintenance (B2)

Name	Value	Unit
Other resources – detergents	0.1	kg/a
Water for cleaning	0.1	kg/a

Reference service life

Name	Value	Unit
Reference service life	30	a

End of life (C1-C4)

Name	Value	Unit
Collected separately Brass, Copper, Plastic Parts, Stainless Steel, Steel, Zinc	1.7117	kg
Collected as mixed construction waste – construction waste for landfilling	0.0328	kg
Recycling Brass	0.1867	kg
Recycling Copper	0.0464	kg
Reuse Plastic parts	0.0039	kg
Recycling StainlessSteel	0.0886	kg
Recycling Steel	0.6870	kg
Recycling Zinc	0.6991	kg
Landfilling - Construction waste for landfilling	0.0328	kg

Reuse, recovery and/or recycling potentials (D), relevant scenario information

Name	Value	Unit
Collected separately waste type (including packaging)	1.745	kg
Recycling Brass	10.7	%
Recycling Copper	2.66	%
Reuse Plastic parts	0.22	%
Recycling StainlessSteel	5.08	%
Recycling Steel	39.36	%
Recycling Zinc	40.05	%
Reuse Plastic packaging (from A5)	0.05	%
Loss Construction waste for landfilling (no recycling potential)	1.88	%

5. LCA: Results

Results shown below were calculated using CML 2000 – Apr. 2013 Methodology.

DESCRIPTION OF THE SYSTEM BOUNDARY (X = INCLUDED IN LCA; MND = MODULE NOT DECLARED)

PRODUCT STAGE			CONSTRUCTION PROCESS STAGE		USE STAGE							END OF LIFE STAGE				BENEFITS AND LOADS BEYOND THE SYSTEM BOUNDARYS
Raw material supply	Transport	Manufacturing	Transport from the gate to the site	Assembly	Use	Maintenance	Repair	Replacement[1)]	Refurbishment[1)]	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal	Reuse- Recovery- Recycling- potential
A1	**A2**	**A3**	**A4**	**A5**	**B1**	**B2**	**B3**	**B4**	**B5**	**B6**	**B7**	**C1**	**C2**	**C3**	**C4**	**D**

6. LCA: Interpretation

This chapter contains an interpretation of the Life Cycle Impact Assessment categories. Stated percentages in the whole interpretation are related to the overall life cycle, excluding credits (module D).
The production phase (modules A1-A3) contributes between 56% and 99% to the overall results for all the environmental impact assessment categories hereby considered, except for the eutrophication potential (EP), for which the contribution from the production phase accounts for app. 14%.
Within the production phase, the main contribution for all the impact categories is the production of steel, with app. 55%, mainly due to the energy consumption on this process. Steel and zinc account in total with app. 80% to the overall mass of the product, therefore, the impacts are in line with the mass composition of the product. The environmental impacts for the transport (A2) have a negligible impact within this stage.
Relatively high impact on EP (85%) during the maintenance phase (module B2) is a result of generated waste water during maintenance of the product. Eutrophication is the enrichment of nutrients in a certain place and it can be aquatic or terrestrial. Waste water contributes to eutrophication therefore, as expected, it is mainly related with the maintenance of the product (B2).
In the end-of-life phase, there are loads and benefits (module D, negative values) considered. The benefits are considered beyond the system boundaries and are declared for the recycling potential of the metals and for the credits from the incineration process (energy substitution).

7. Requisite evidence

Not applicable in this EPD.

ODP	Depletion potential of the stratospheric ozone layer	[kg CFC11-Eq.]	2.49E-09	2.54E-13	6.40E-15	7.13E-11	2.11E-13	3.10E-14	-7.95E-10
AP	Acidification potential of land and water	[kg SO_2-Eq.]	6.40E-02	2.98E-04	5.97E-07	5.62E-02	2.48E-04	2.89E-06	-1.22E-02
EP	Eutrophication potential	[kg N-eq.]	2.66E-03	2.10E-05	1.82E-08	4.43E-02	1.75E-05	8.82E-08	-4.20E-04
Smog	Ground-level smog formation potential	[kg O_3-eq.]	8.08E-01	6.13E-03	4.69E-06	2.31E-01	5.11E-03	2.27E-05	-1.02E-01
Resources	Resources – fossil resources	[MJ]	1.75E+01	9.88E-02	8.70E-05	7.63E+00	8.24E-02	4.22E-04	-3.37E+00

RESULTS OF THE LCA - RESOURCE USE: One piece of single point lock Corbin Russwin CL3300 Series

Parameter	Parameter	Unit	A1 - A3	A4	A5	B2	C2	C4	D
PERE	Renewable primary energy as energy carrier	[MJ]	2.51E+01	-	-	-	-	-	-
PERM	Renewable primary energy resources as material utilization	[MJ]	0.00E+00	-	-	-	-	-	-
PERT	Total use of renewable primary energy resources	[MJ]	2.51E+01	2.71E-02	6.19E-05	1.18E+02	2.26E-02	3.00E-04	-1.26E+01
PENRE	Non renewable primary energy as energy carrier	[MJ]	2.17E+02	-	-	-	-	-	-
PENRM	Non renewable primary energy as material utilization	[MJ]	0.00E+00	-	-	-	-	-	-
PENRT	Total use of non renewable primary energy resources	[MJ]	2.17E+02	6.89E-01	9.39E-04	6.21E+01	5.75E-01	4.56E-03	-4.61E+01
SM	Use of secondary material	[kg]	1.43E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00
RSF	Use of renewable secondary fuels	[MJ]	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00
NRSF	Use of non renewable secondary fuels	[MJ]	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00
FW	Use of net fresh water	[m^3]	9.84E-02	1.91E-05	4.88E-06	6.13E-02	1.59E-05	2.37E-05	-4.68E-02

RESULTS OF THE LCA – OUTPUT FLOWS AND WASTE CATEGORIES: One piece of single point lock Corbin Russwin CL3300 Series

Parameter	Parameter	Unit	A1 - A3	A4	A5	B2	C2	C4	D
HWD	Hazardous waste disposed	[kg]	1.18E-02	1.57E-06	6.56E-08	3.63E-03	1.31E-06	3.18E-07	-5.17E-03
NHWD	Non hazardous waste disposed	[kg]	7.03E-01	8.67E-05	1.86E-04	3.56E-01	7.22E-05	9.03E-04	-4.66E-02
RWD	Radioactive waste disposed	[kg]	1.27E-02	9.03E-07	3.74E-08	1.38E-03	7.52E-07	1.81E-07	-4.97E-03
CRU	Components for re-use	[kg]	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	-
MFR	Materials for recycling	[kg]	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	-
MER	Materials for energy recovery	[kg]	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	0.00E+00	-
EEE	Exported electrical energy	[MJ]	0.00E+00	0.00E+00	3.82E-03	0.00E+00	0.00E+00	1.85E-02	-
EET	Exported thermal energy	[MJ]	0.00E+00	0.00E+00	1.05E-02	0.00E+00	0.00E+00	5.09E-02	-
